# WHAT WE DO

---

With twenty-million square-feet of install experience, Energy Roofing Solutions is committed to providing innovation to the roofing consumer and industry. We believe in energy efficient products without the high-dollar price tag.

Our goal for our customers is to provide a positive experience within a contracting scenario. We will provide you with key information that will positively affect your property and ultimately save you money.

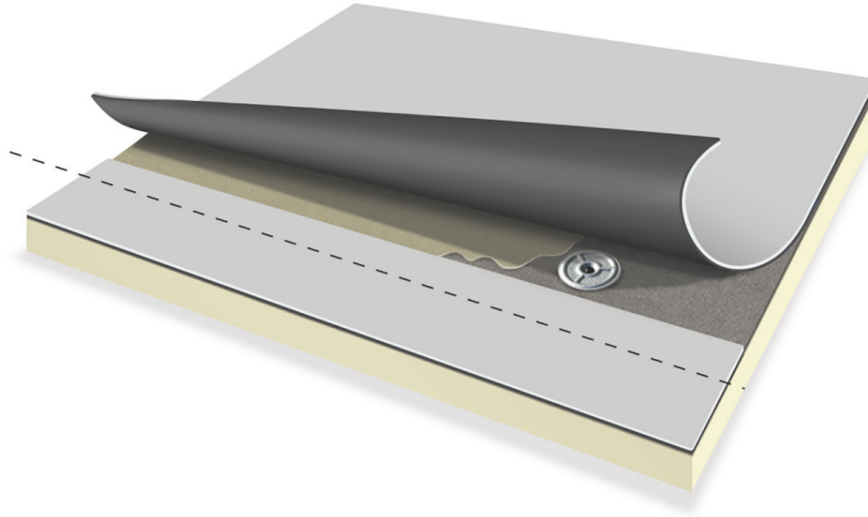

To be a leader within the commercial roofing space it is paramount to truly care about being the best. We are driven to settle for nothing less than excellence. We are reinventing the roof buying process through smart technology.

We start and finish with customer satisfaction. We will continue with great pricing, education, attention to detail, leadership in safety, professional personnel, quality materials, smart consulting, strong work ethic, and integrity.

The politics of dealing with re-roofing, insurance claims, budgets, general contractors, etc... can be daunting. We are a full-service roofing company dedicated to make our business owners smarter and more profitable.

We are serious about working together.

# RETROFIT

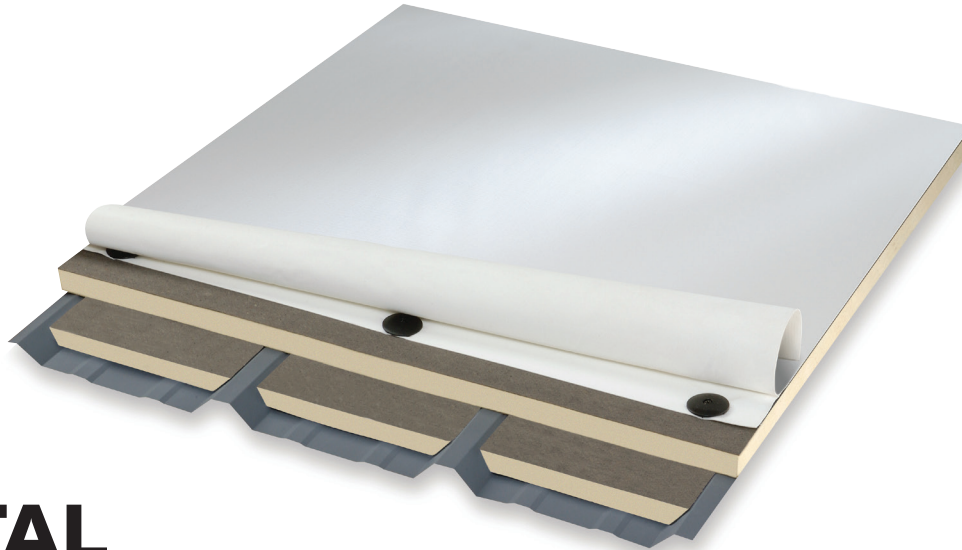

## FLAT

A flat roofing system should be white, which is one of the most important progressions in commercial roofing today. Energy Roofing Solutions can install a white roofing system over most existing roofing systems such as Metal, Tar and Gravel, Built-up Roofing, Modified Bitumen, EPDM, PVC and TPO. White roofing systems are also known as "Cool roofs". A white roof stays cooler unlike dark roofs, which absorb the sun's rays, making the inside of a building hotter. A white roof is able to reflect the sun's ultraviolet rays, preventing them from being absorbed into the building.

# RETROFIT

## METAL

With a proper roof assessment from Energy Roofing Solutions, our single-ply metal retrofit systems can be installed over various existing metal roof types. Our solution will provide energy cost savings, added R-Value, durability, waterproof protection and can eliminate constant maintenance with a 15—20 year material and labor warranty for all of our customers. Energy Roofing Solutions provides single-ply metal retrofit systems that meet stringent uplift requirements and comply with major national, state and local building and insurance codes.

# RESTORATION

## FLAT AND METAL

Energy Roofing Solutions installs elastomeric coatings for many roof types. The most common elastomeric restorations will be successfully installed on the following roof types:

---

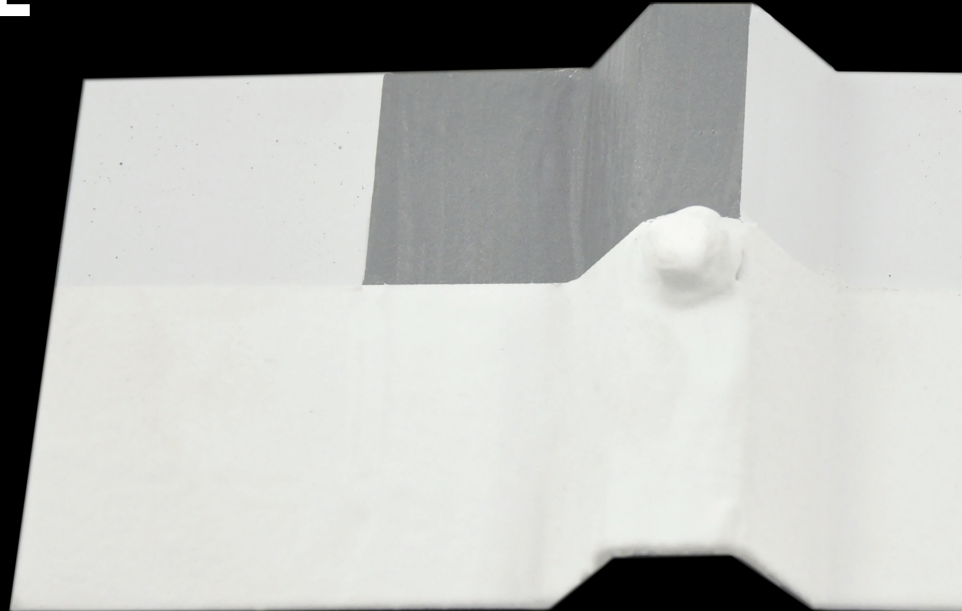

**METAL**

**EPDM**

**PVC**

**TPO**

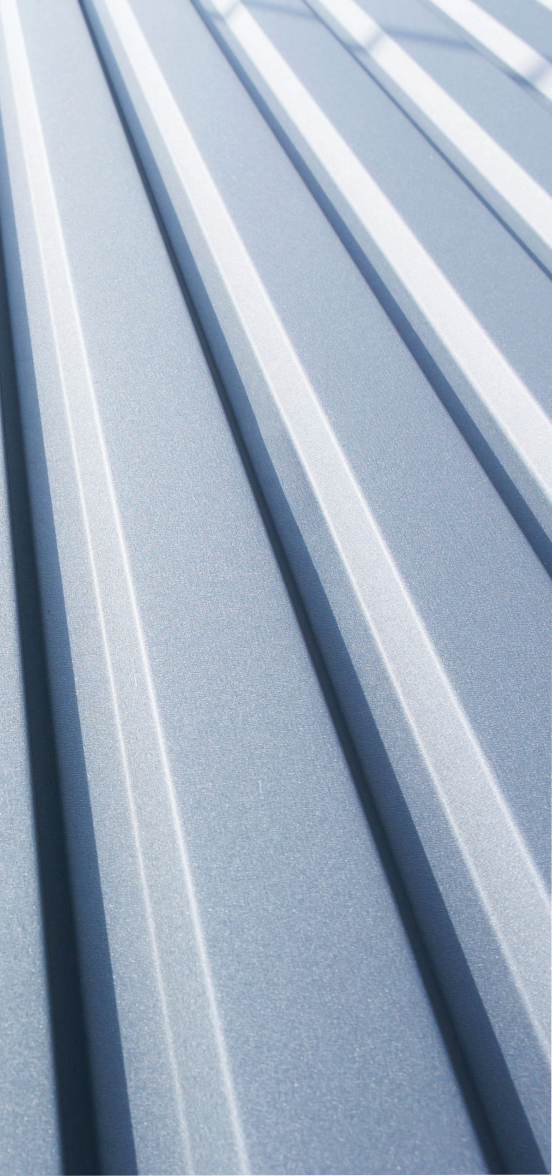

**MODIFIED BITUMEN**

REPLACEMENT  
AND REPAIR

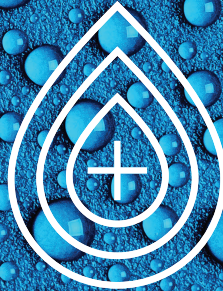

Energy Roofing Solutions provides a roofing service for all types. We specialize in full roof replacement, repairs and maintenance on flat roofing, metal roofing and shingles. With our strong ideals, we surpass our competition and your expectations by keeping you leak-free with an innovative and positive experience.
